Bad Kissingen, den 23.04.2012

Bad Kissingen Proclamation 2012

**By the international group of neurootologists and neurosensorial researchers
against dangerous health risks due to pulsating electromagnetic fields.**

During the 39th annual congress of the International Neurootological and Equilibrioemtric Society Reg. (GNA, SNE, NES) on April 22nd 2012 in the Arkadenbau of the health spa center of the city of Bad Kissingen, a consensus was achieved in and intensive and deeply going discussion between medical experts from Asia, Europe and America about etiologies with sensorial disorders of the head and the objective and quantitative neurootometric examination methods etc., where they stated:

01.) In contrast to the senses warning of over-strong noises (ear) and over-strong light impacts (eye), man does not avail of specialised sensors warning him of the impacts of radioactive radiation or pulsating electromagnetic fields.

02.) Ukrainian physicist Prof. Dr. Konstantin Trinus (Prof. Dr. Konstantin Trinus, Dept. International National Medical Academy for Postgraduate Education, 9, Dorokozkytska str., 04112 Kyiv, Ukraine, E-Mail: trinus.konstantin@gmail.com, who has become known through his investigating of victims of the Chernobyl disaster, and physicist and neurootologist Prof. Dr. Claus-Frenz Claussen from Bad Kissingen (Extraordinarius for Neurootology, Head of the Neurootological Research Institute of the International Society for the Investigation of Smell, Taste, Ear and Equilibriometric Disorders Reg. (4-GF e.V.) presented research results about measurable changes of brain functions in, for instance, using pulsating electromagnetic fields as a therapy method in the heads of tinnitus patients.

03.) Neurootologists from all over the world then discussed about anamneses with numerous complaints of patients being exposed to continued pulsating electromagnetic fields in the zone of affected burden of electric power lines with the

complaints including headaches, alertness disorders, sleeping disorders, vertigo, drowsiness, dizziness, decline in performance, unrest, vegetative disturbances, depression, etc.

04.) In the laboratory tests known to the authors concerning the effects of magnetic fields on the human brain, it could be even shown on nerve cell cultures, that these brain cells being cultivated there could be stimulated to abnormal movements in an electromagnetic way alone via nearby mobile phone pulsations – the question, whether this gives rise to tumours such as in the cases of radar tower crew members in the former GDR and in the German armed forces, still was left open.

05.) Due to these findings, many of the present neuroscientists from all over the world agreed on drawing the attention of the governments in their home countries to these dangers and to establish expert expertise for finding a remedy against civilizational damages through electric power lines, mobile phones, etc. (as it already has worked in a large scale concerning intoxication through tobacco fume by banning cigarettes).

06.) In Germany, neurotologist and former first German Crew Surgeon of the European Astronauts as well as ear and sense scientist Prof. Dr. Gottfried Aust (Prof. Dr. Gottfried Aust, Bamberger Straße 8, 10777 Berlin, Germany, E-Mail: gottfriedaust@online.de) from Berlin has taken over the task of information and collaboration when contacting the authorities and departments in Berlin being in charge.

07.) Further scientific elaborations concerning the „Bad Kissingen Proclamation 2012“ are being prepared in many different places all over the world as, for instance, in Kiev (Ukraine), in Bydgoszcz (Poland), in Bad Kissingen (Germany), in Buenos Aires (Argentina), in Calcutta (India), etc..

They also include portrayals of risks with respect to pulsating electromagnetic fields radiated by mobile phones, which are held over a long time at the head. This is a new civilizational danger against man.

This proclamation is to be made known via the media but also via the scientific publication organs as well as the internet as, for instance, by the internet representatives of the GNA/SNE/NES in Buenos Aires - Argentina with the Homepage www.vertigo-dizziness.com/gna-nes. We are positive that we have to point to a danger, which is already spreading widely, and that we can alleviate and finally totally remove this danger by appropriate and innovative technical solutions.

On behalf of the International Neurotological and Equilibrimetric Society Reg.

Prof. Dr. C.-F. Claussen
President of the NES
